Red Hat System Administration I («RH124»)

This course is designed for IT professionals without previous Linux administration experience. The course focuses on providing students with Linux administration "survival skills" by focusing on core administration tasks.

Duration: 5 days
Price: 3'150.–
Vendor code: RH124

Content

This course provides a foundation for students wishing to become full-time Linux system administrators by introducing key command line concepts and other enterprise-level tools. These concepts are further developed in the follow-on course, Red Hat System Administration II (RH134).

- **Access the command line**
  - Log in to a Linux system and run simple commands using the shell
- **Manage files from the command line**
  - Copy, move, create, delete, and organize files from the bash shell prompt
- **Get help in Red Hat Enterprise Linux**
  - Resolve problems by using online help systems and Red Hat support utilities
- **Create, view, and edit text files**
  - Create, view, and edit text files from command output or in an editor
- **Manage local Linux users and groups**
  - Manage local Linux users and groups, and administer local password policies
- **Control access to files with Linux file system permissions**
  - Set Linux file system permissions on files and interpret the security effects of different permission settings
- **Monitor and manage Linux processes**
  - Obtain information about the system, and control processes running on it
- **Control services and daemons**
  - Control and monitor network services and system daemons using systemd
- **Configure and secure OpenSSH service**
  - Access and provide access to the command line on remote systems securely using OpenSSH
- **Analyze and store logs**
  - Locate and accurately interpret relevant system log files for troubleshooting purposes
- **Manage Red Hat Enterprise Linux networking**
  - Configure basic IPv4 networking on Red Hat Enterprise Linux systems
- **Archive and copy files between systems**
  - Archive files and copy them from one system to another
- **Install and update software packages**
  - Download, install, update, and manage software packages from Red Hat and yum package repositories
- **Access Linux file systems**
  - Access and inspect existing file systems on a Red Hat Enterprise Linux system
- **Use virtualized systems**
  - Create and use Red Hat Enterprise Linux virtual machines with KVM and libvirt
- **Comprehensive review**
  - Practice and demonstrate the knowledge and skills learned in this course

Key Learnings

- Introduction to the command line
- Managing physical storage
- Learning how to install and configure software components and services
- Establishing network connections and firewall access
- Monitoring and managing processes
- Managing and securing files
- Administrating users and groups
- Accessing Linux file systems
- Installing and using virtualized systems
- Reviewing the system log files and journal

Target audience

IT professionals across a broad range of disciplines who need to perform essential Linux administration tasks including installation, establishing network connectivity, managing physical storage, and basic security administration.

Requirements

There are no formal prerequisites for this course; however, previous operating system administration experience will be very beneficial.

- Getting Started with Linux Fundamentals («RH104»)

Additional information

A Red Hat course in english can be organised under certain conditions, do not hesitate to contact us if you are interested.

Further courses

- Red Hat System Administration II («RH134»)
- Red Hat System Administration II with RHCSA («RH135»)
