

Windows Server Administration («55371A»)

This five-day instructor-led course is designed primarily for IT professionals who have some experience with Windows Server. It teaches IT professionals the fundamental admin skills required to deploy and support Windows Server in most organizations.

Duration: 5 days

Price: 3'950.–

Course documents: Digital Courseware

Content

IMPORTANT NOTICE

This is not an official Microsoft course. The content of this training is based on Microsoft's retired *WS-011* course and is developed by the Microsoft Community.

This course is designed for professionals who will be responsible for managing identity, networking, storage and compute by using Windows Server, and who need to understand the scenarios, requirements, and options that are available and applicable to Windows Server.

Module 1: Windows Server Administration Overview

This module describes how to distinguish different Windows Server editions and techniques for deployment, servicing and activation. The module also introduces Windows Server Core and compares it with the Desktop Experience version. The module describes tools and concepts for administering Windows Server, such as Windows Admin Center, PowerShell, and delegation of privileges.

Lessons

- Introducing Windows Server
- Windows Server Core Overview
- Windows Server administration principles and tools overview

Lab: Deploying and configuring Windows Server

- Deploying and configuring Server Core
- Implementing and using remote server administration

Module 2: Identity Services in Windows Server

This module introduces identity services and describes Active Directory Domain Services (AD DS) in a Windows Server environment. The module describes how to deploy domain controllers in AD DS, as well as the Azure Active Directory (AD) and the benefits of integrating Azure AD with AD DS. The module also covers Group Policy basics and how to configure group policy objects (GPOs) in a domain environment. Finally, the modules describes the role of Active Directory certificate services and certificate usage.

Lessons

- AD DS Overview
- Deploying Windows Server domain controllers
- Azure AD overview
- Implementing Group Policy
- Active Directory Certificate Services overview

Lab: Implementing Identity Services and Group Policy

- Deploying new domain controller on Server Core
- Configuring Group Policy
- Deploying and using certificate services
- Explain Group Policy basics and configure GPOs in a domain environment
- Describe the role of Active Directory certificate services and certificate usage

Module 3: Network Infrastructure services in Windows Server

This module describes how to implement core network infrastructure services in Windows Server. The module covers how to deploy, configure and manage DNS and IPAM. The module also describes how to use Remote Access Services.

Lessons

- Deploying and managing DHCP
- Deploying and managing DNS service
- Deploying and managing IPAM
- Remote Access Services in Windows Server

Lab: Implementing and configuring network infrastructure services in Windows Server

- Deploying and configuring DHCP
- Deploying and configuring DNS
- Implementing Web Application Proxy

Module 4: File Servers and Storage management in Windows Server

This module describes how to configure file servers and storage in Windows Server. The module covers file sharing and deployment of Storage Spaces technology. The module describes how to implement data deduplication, iSCSI based storage in Windows Server, and finally, how to deploy DFS.

Lessons

- Volumes and File Systems in Windows Server
- Implementing sharing in Windows Server
- Implementing Storage Spaces in Windows Server
- Implementing Data Deduplication
- Implementing iSCSI
- Deploying Distributed File System

Lab: Implementing storage solutions in Windows Server

- Implementing Data Deduplication
- Configuring iSCSI storage
- Configuring redundant storage spaces
- Implementing Storage Spaces Direct

Module 5: Hyper-V virtualization and containers in Windows Server

This module describes how to implement and configure Hyper-V VMs and containers. The module covers key features of Hyper-V in Windows Server, describes VM settings, and how to configure VMs in Hyper-V. The module also covers security technologies used with virtualization, such as shielded VMs, Host Guardian Service, admin-trusted and TPM-trusted attestation, and KPS.

Lessons

- Hyper-V in Windows Server
- Configuring VMs
- Securing virtualization in Windows Server
- Containers in Windows Server
- Overview of Kubernetes

- Creating and configuring VMs
- Installing and configuring containers

Module 6: High Availability in Windows Server

This module describes current high availability technologies in Windows Server. The module describes failover clustering and considerations for implementing it, and how to create and configure failover clustering. The module also explains stretch clusters and options for achieving high availability with Hyper-V VMs.

Lessons

- Planning for failover clustering implementation
- Creating and configuring failover cluster
- Overview of stretch clusters
- High availability and disaster recovery solutions with Hyper-V VMs

Lab: Implementing failover clustering

- Configuring storage and creating a cluster
- Deploying and configuring a highly available file server
- Validating the deployment of the highly available file server

Module 7: Disaster recovery in Windows Server

This module describes disaster recovery technologies in Windows Server and how to implement them. The module covers how to configure and use Hyper-V Replica and describes Azure Site Recovery. The module also covers how to implement Windows Server backup and describes the Azure Backup service.

Lessons

- Hyper-V Replica
- Backup and restore infrastructure in Windows Server

Lab: Implementing Hyper-V Replica and Windows Server Backup

- Implementing Hyper-V Replica
- Implementing backup and restore with Windows Server Backup

Module 8: Windows Server security

This module describes Windows Server security features and how to implement them. The module covers credentials used in Windows Server and explains how to implement privileged access protection. In addition to describing methods and technologies for hardening Windows Server security, the module explains how to configure Just Enough Administration (JEA) and how to secure SMB traffic. Finally, the module covers Windows Update, its deployment and management options.

Lessons

- Credentials and privileged access protection
- Hardening Windows Server
- JEA in Windows Server
- Securing and analyzing SMB traffic
- Windows Server update management

Lab: Configuring security in Windows Server

- Configuring Windows Defender Credential Guard
- Locating problematic accounts

- Implementing LAPS

Module 9: RDS in Windows Server

This module describes key Remote Desktop Protocol (RDP) and Virtual Desktop Infrastructure (VDI) features in Windows Server. The module covers how to deploy session-based desktops and describes personal and pooled virtual desktops.

Lessons

- Overview of RDS
- Configuring a session-based desktop deployment
- Overview of personal and pooled virtual desktops

Lab: Implementing RDS in Windows Server

- Implementing RDS
- Configuring Session Collection Settings and using RDC
- Configuring a virtual desktop template

Module 10: Remote access and web services in Windows Server

This module describes how to implement virtual private networks (VPNs), Network Policy Server (NPS), and Microsoft Internet Information Services (IIS). The module describes Always On VPN functionality, as well as how to configure NPS and Web Server (IIS) in Windows Server.

Lessons

- Implementing VPNs
- Implementing Always On VPN
- Implementing NPS
- Implementing Web Server in Windows Server

Lab: Deploying network workloads

- Implementing VPN in Windows Server
- Deploying and Configuring Web Server

Module 11: Server and performance monitoring in Windows Server

This module describes how to implement service and performance monitoring, and apply troubleshooting in Windows Server. The module highlights monitoring tools and describes how to monitor performance, including event logging and how to perform event logging monitoring for troubleshooting purposes.

Lessons

- Overview of Windows Server monitoring tools
- Using Performance Monitor
- Monitoring event logs for troubleshooting

Lab: Monitoring and troubleshooting Windows Server

- Establishing a performance baseline
- Identifying the source of a performance problem

Module 12: Upgrade and migration in Windows Server

This module describes how to perform upgrades and migrations for AD DS, Storage, and Windows Server. The module covers tools to use for AD DS migration. The module also covers the Storage Migration Service, and finally, Windows Server migration tools and usage scenarios.

Lessons

- AD DS migration
- Storage Migration Service
- Windows Server migration tools

Lab: Migrating Server workloads

- Implementing Storage Migration Service

Key Learnings

- Using administrative techniques and tools in Windows Server
- Implementing identity Services
- Managing network infrastructure services
- Configuring file servers and storage
- Managing virtual machines using Hyper-V virtualisation and containers
- Implementing high availability and disaster recovery solutions
- Applying security features to protect critical resources
- Configuring Remote Desktop Services
- Configuring a virtual machine-based desktop infrastructure deployment
- Implementing remote access and web services
- Implementing service monitoring and performance monitoring and apply troubleshooting
- Performing upgrades and migration related to AD DS, and storage

Target audience

This course is intended for Information Technology (IT) Professionals who have some experiencing working with Windows Server and are looking for a single five-day course that covers core administration components and technologies in Windows Server 2019.

This course also helps server administrators from previous Windows Server versions to update their knowledge and skills related to Windows Server.

The course is also to individuals from a service desk role who wish to transition into server maintenance.
